

■ TCP/IP Settings

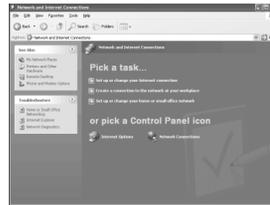

(1) From the “Start” menu on your desktop, select “Control Panel”.

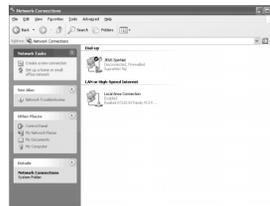

(2) In the “Control Panel” window, click “Network and Internet Connections”.

(3) The “Network and Internet Connections” window will appear. Click “Network Connections”.

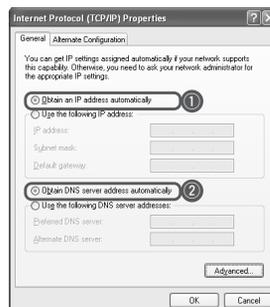

(4) The “Network Connections” window will appear. In the section titled “LAN or High Speed Internet,” the settings for the LAN card (Ethernet adapter) you will use are displayed. Right-click on these settings and select “Properties” from the menu which appears.

(5) The “Local Area Connection Properties” window will appear with the “General” tab selected. In the section titled “This Connection uses the following Items,” verify that the “Internet Protocol (TCP/IP)” item is checked, then select it and click the “Properties” button.

(6) The “Internet Protocol (TCP/IP) Properties” window will appear. Click the “General” tab and verify that the settings are as shown on the right.

- ① Verify that “Obtain an IP address automatically” is selected.
- ② Verify that “Obtain DNS server address automatically” is selected.

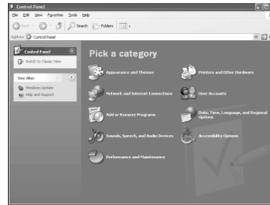

(7) After verifying the items listed above, click the “OK” button to return to the “Local Area Connection Properties” window. Click the “OK” button.

■ Checking your IP Address

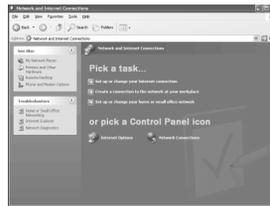

(1) From the “Start” menu on your desktop, select “Control Panel”.

(2) In the “Control Panel” window which appears, double-click “Network and Internet Connections”.

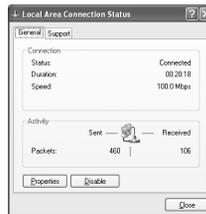

(3) The “Network and Internet Connections” window will appear. Click “Network Connections”.

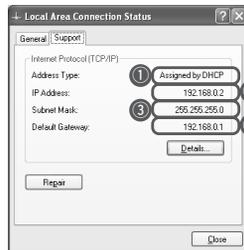

(4) The “Network Connections” window will appear. In the section titled “LAN or High Speed Internet,” the settings for the LAN card (Ethernet adapter) you will use will appear.

(5) Right-click on the settings for the LAN Card (Ethernet adapter) you will use. Select “Status” from the menu which appears.

(6) The “Local Area Connection Status” window will appear. Click the “Support” tab, and verify that the settings are as shown on the right.

(7) After verifying the items described above, click the close button in the upper-right corner of the “Local Area Connection Status” window to close it.

- 1 Verify that “Address Type” is set to “Assigned via DHCP”.
- 2 Verify that “IP Address” is set to the address which your router has assigned to it.
- 3 Verify that “Subnet Mask” is set to “255.255.255.0”.
- 4 Verify that “Default Gateway” is set to the IP address of your router.
